INTRASITE® Gel

INTRASITE Gel er en amorf, ikke-klæbende hydrogel som nænsomt rehydrerer nekrotisk væv,[1-2,6-7,9,11,25-26,32,33] og muliggør autolytisk debridering. Den løsner og absorberer også fibrinbelægninger og ekssudat.[1-2,6,9,12,33,34] Endvidere danner og opretholder INTRASITE Gel et fugtigt sårmiljø ved at tilføre fugt til såroverfladen.[1-2,4,7,27,29,31,31,35] under de senere stadier af sårlukningen. Dette gør INTRASITE Gel anvendelig til alle stadier i sårbehandlingen.

Fordele

- Bakteriostatisk virkning[1-4]
- Effektiv debridering[4-26] og fjernelse af dødt væv[4-10,27-28]
- Muliggør re-epithelialisering og fører til mindre ardannelse efter heling[7,27,30-32]

Indikationer

- Velegnet til fjernelse af nekrotisk væv fra overfladiske, underminerede og dybe sår (tryksår, bensår, diabetiske fodsår, maligne sår, brandsår, kirurgiske sår, skoldninger, amputationssår, rifter og flænger). Desuden egnet til behandling af granulerende kavitetssår, hudafskrabninger og sår fra strålingsskader
